

How to install a Maniaplanet Title

It's really simple, just follow these 6 steps:

Step 1: Download a title, e.g. [SRE.Title.Pack.Gbx](#) .

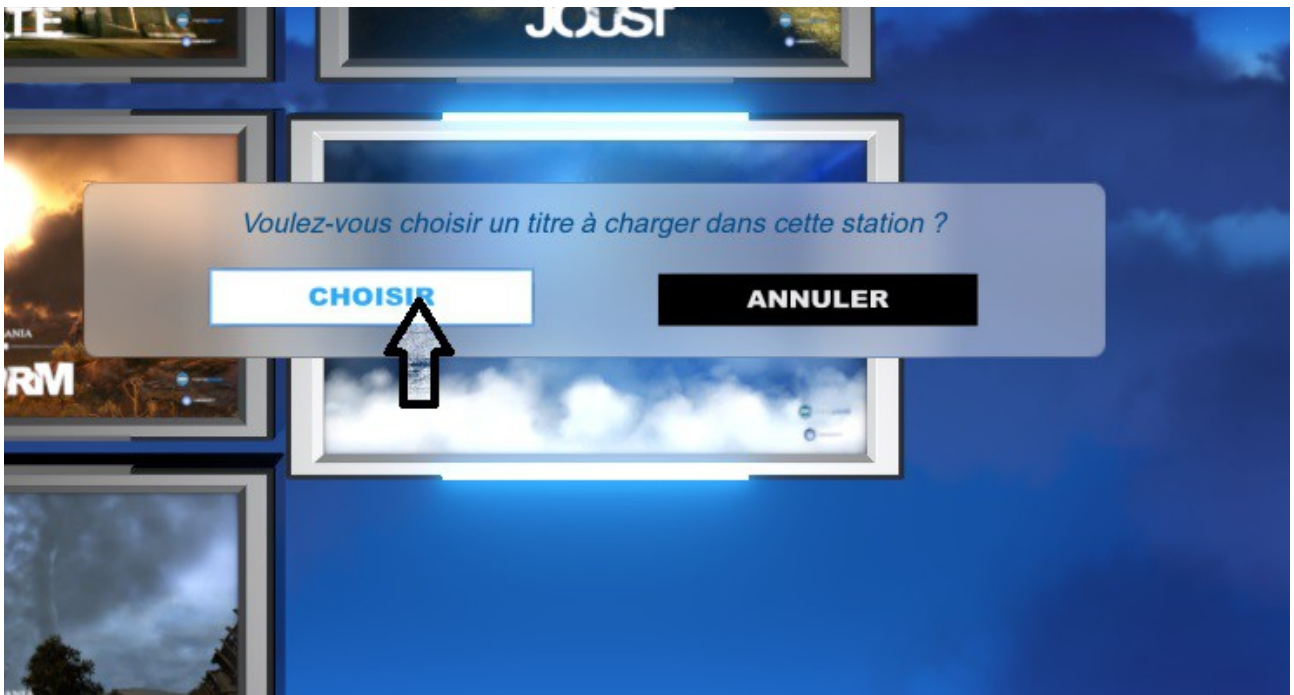

Step 2: Move it into the right place, at ***My Documents/Maniaplanet/Packs***

[important at updates: First exit Maniaplanet, then make sure first to delete or remove the old version of the SRE-Title to avoid Windows' versioning, which would result in MP ignoring the update.]*

Step 3: Start Maniaplanet and double-click an empty pane (arrow below)

Step 4: A message window pops up: „Do you want to choose a title to load into this Station?“ Click „**CHOOSE**“.

Step 5: Next you see all Title cases available in your Packs folder. Click **STADIUM RE**

Step 6: Your Title is installed now and you see the title information. Might be worth reading it ;)

Click OK, now you can enter the **TM² Stadium Racing Evolution** Title, short **SRE** or just „**RE**“ like in our map names.

Start **SRE** by double click on the panel, where you just installed the title.

MULTIPLAYER > BROWSE SERVERS: at the moment (31.1.) the only server is **NRL Nascar Racing Evolution** with already more than 60 tracks. We think this list will soon grow.

A track builder tutorial will follow soon on TM-Nascar.com, „Items“ can behave pretty much different than the blocks you are used to and there are some tricks worth to know.

HF on the **Stadium Racing Evolution** servers ;)

Nascar Racing Team (>>NRT>>)

How to Uninstall a Title?

Very simple, just not obvious:

Click once on the title you want to get rid off to get it high-lighted, press **DEL**, confirm „**UNLOAD**“.

With uninstalling a Title all LPs etc you achieved in this Title are deleted.
